PROFESSIONAL SUMMARY

Aspiring Penetration Tester with strong Python skills and hands-on project experience. Built and deployed a public website for student use, along with multiple GUI applications demonstrating problem-solving abilities. Practical knowledge of penetration testing tools through TryHackMe, with working familiarity of Linux environments and version control.

EDUCATION

Master of Computer Application (MCA) | Kannur University | 2024 – 2026

Bachelor of Commerce with Computer Application (B. Com CA) | Calicut University | 2021 – 2024

Higher Secondary (+1, +2) – Computer Science | CBSE | 2019 – 2021

TECHNICAL SKILLS

Programming Languages: Python (Strong), JavaScript, Java, C, C++, Kotlin, PHP (Basic familiarity)

Developer Tools: Git, GitHub, Linux Command Line, Bash Scripting (Basic)

Databases: MySQL (Query writing, data retrieval)

Security: Penetration Testing fundamentals, Nmap, Wireshark, Metasploit, Burp Suite.

Applications: MS Excel, MS Power Point, MS Word

PROJECTS

1. MCA Result Portal (2024 – 2026 Batch) | HTML, CSS, JS, PHP, MySQL
    - Developed and deployed a public website enabling classmates to view semester-wise SGPA scores and rankings.
    - Serves all MCA students of 2024 – 2026 batch and respective class tutors.
    - URL to the website: https://mca.ct.ws
2. Zane's Optimizer | Python, Tkinter
    - Developed a GUI application to optimally place input images onto PDF document to avoid space wastage.
    - Reduces paper wastage by optimizing image placement for academic printouts
    - Helps students save paper during projects, assignments and record works.
3. Rapid-Prototype GUI Applications | Python, Tkinter.
    - Built a functional calculator and Linux user management tool in response to in class programming challenges.
4. Stock Price Prediction with ML | Python
    - Built ML-powered CLI tool to predict next-day stock prices using historical data.
    - Implements daily dataset updates and model retraining for improved accuracy.
